

# Accessories

Here are all the **SCREENLINE** accessories which will make it easier to install the screens and will improve their efficiency.

## Radiofrequency remote control

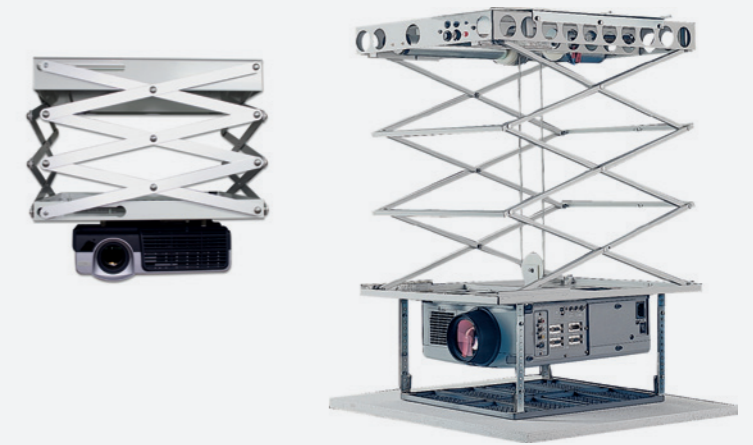

Radio frequency remote control. It can be installed on the screen also after mounting.

## Video Lift

It is a range of elevators for videoprojectors designed for professional applications.

They are equipped with a pantograph which permits the lowering of the projector down to 80cm (mod. VL 80), 130 cm (mod. VL 130) and to 230 cm (mod. VL 230) from the ceiling.

## Radiofrequency remote control unit for Biformat

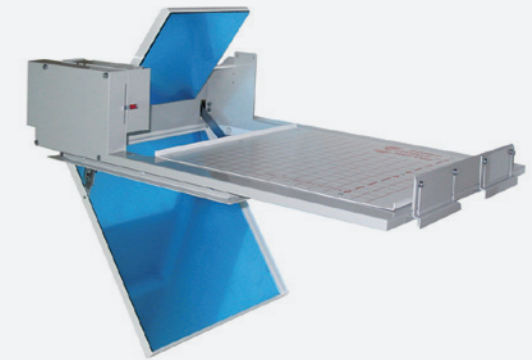

Radio frequency remote control for double surface screens.

## Cinema Mirror

An active optic set to be installed in those places where the projection screen and the ceiling are on the same level or with a difference of 0-12 cm, without causing the trapeze effect on the image.

Excellent to be combined with the Inceiling screens, to get perfectly hidden installations.

## RTU universal

Radio transmitter unit for videoprojectors. Designed to automatize the activation of videoprojection systems, the new RTU permits the synchronization of videoprojector and screen. It is provided with a transmitter which is connected to the power supply of the projector and a receiver which activates the screen. When the projector is switched on an impulse is sent to the receiver via radio frequency to lower the screen.

Similarly, when the projector is switched off a second impulse turns the screen off. The remote control provided also allows manual operations.

## Spacer brackets 40÷60

For Slim - Mot motorized screens.
